

CorroborAI

Evidence before exceptions.

Explainable reconciliation
for HR and time-system data.

Kenneth Chen & Ning Ye

Five inputs. One traceable path.

HR source · Time destination · Position history · Status reasons · Mapping

Three verdicts, with evidence.

COMPLIANT

Camille → Camille

C00001 · givenName
Person 1001 · rows 2

Same expected value.
Rule R01.

JUSTIFIED DIFFERENCE

A declared email prefix

cexemple001@
loto-quebec.com

Destination adds **dev-08-v2_**.

C00014 · person 1001
Exact base still required · R03.

ANOMALY

35 → 38 hours

C00037 · weeklyHoursOverride
Person 1002 · rows 3

Expected 35, observed 38.
No permitted transformation · R21.

Email suffix 001 comes from Matricule/personID 1001. A declared destination prefix is optional.
Anomaly means a mapping mismatch; an HR expert must still establish its operational cause.

Load → inspect → export.

1 Choose the five workbooks

2 Inspect all three verdicts

3 Open the role-label candidates

4 Download and reopen Excel

5 / 4

source / destination
assignment rows

101

field and structural
checks

One unmatched assignment stays visible.

Investigation focuses attention.

Audit preserves the complete trail.

Recorded synthetic exports are ready if the live interface fails.

Useful suggestions. Honest limits.

Character TF-IDF + cosine, fitted locally without verdict labels.
502-Services finaciers → 502-Services financiers

Frozen synthetic evaluation	TF-IDF	difflib
Correct accepted top 1 · 12 positives	12 / 12	12 / 12
Correct abstentions · 4 other queries	3 / 4	1 / 4
Wrong accepted suggestions · all 16	1	3

Owner-authored cases, frozen before evaluation. Fixed shared thresholds, no calibration.
Small synthetic test; not real HR accuracy or proof of general superiority.

Trust comes with evidence.

45

passing tests

Business branches · multiple assignments
Historical bounds · input errors · exports

Reviewed empty-workbook regression:
actionable error, covered by tests.

- Original inputs remain unchanged.
- Clean reproduction and actual download checks.
- Unknown histories and joins stay reviewable.
- HR data and learned vocabulary remain local.

Operational correctness still needs domain review.
No independent HR answer key is claimed.

Inspect the decision. Keep the evidence.

Deterministic decisions, explicit uncertainty
and proof an investigator can export.
